True Digital Dossier

COMBINE SUPPLY CHAIN DOCUMENTATION & COMMUNICATION IN ONE EASY-TO-USE SOLUTION

A plug-n-play blockchain record-keeping tool for supply chain due diligence

Most large supply chain companies use legacy enterprise software resource planning tools to track and manage their chains. More and more, these tools lack the capabilities needed for collecting and structuring information from multiple sources in real-time. They also don't offer the peer-to-peer messaging systems needed to cover all supply chain communication. Because documentation is spread across different systems, the audit process is bogged down by outdated or old versions of critical documents.

Preserve and audit supply chain records

As experts in plug-n-play content management, the team at True Digital Dossier knows how to preserve, notarize and enhance a supply chain's shared information including POs, certificates of origin, and bills of lading — creating a single source of truth for procurement, audit and records management.

That's why we developed a plug-in digital due-diligence solution for centrally managing supply chain information within Digital Dossiers. Our groundbreaking solution, built on digital cryptography, adds a unique digital ID to every document generated by members of the supply chain.

This creates a self-updating immutable record that can be maintained and preserved over time and shared across organizational boundaries to increase visibility. Furthermore, our solution eliminates repetitive and unnecessary tasks and reduces risk by providing a comprehensive view of who interacts with confidential documents.

Increase trust

- Create a proven ecosystem
- Ensure provenance and traceability
- Get visibility into performance
- Easily connect to existing data stores

Improve accuracy

- Improve quality of data
- Enforce version control
- Increase visibility

Increase liquidity

- Faster audits
- Provide procurement with more insights
- Stop information leakage

Core to the True Digital Dossier solution is blockchain technology. A blockchain offers a simple, yet ingenious way to track data. Because data can easily be manipulated or destroyed in today's digital age, it is challenging to know whether it is accurate and authentic. Our blockchain gives you a simple yet ingenious way to verify information, detect tampering and tell a better story about the history of your asset.

Digital information is uploaded to our searchable Digital Dossier. A Digital ID, a unique combination of numbers and letters that represents the original content, is assigned to each digital asset. This drastically increases data security.

Each document is encrypted with a unique, digital identifier. We assign a Digital ID to each document which drastically increases the security and transparency of due diligence reviews.

We detect any changes to your content or a Digital ID. We also can tell you who handled the content, eliminate duplicates and ensure you have the latest versions.

A COMPLETE SOLUTION FOR DIGITAL DUE DILIGENCE

Once your property information has been verified, True Digital Dossier offers a rich set of features to streamline the due diligence process. This allows you to create a single, trusted information package with the property's life-time information.

- Cloud-based
- 24/7 customer service
- Launch in minutes
- Multi-lingual user interface
- Connects to existing data stores
- Blockchain as a service plug-in

- Group or peer-to-peer communications
- Notifications and alerts
- Chain-wide FAQ
- Drag-and-drop document uploads
- 100% OCR advance search.
- Read, write, view access
- High power due diligence tools

- All major security credentials
- Plug-in lightweight blockchain tool
- Immutable audit records
- Access rights control
- Redaction
- On/off

When the property changes hands, control of the Digital Dossier can be transferred to the new lender, ensuring the verified information remains available and useable in the future. Digital information can be checked out of the Digital Dossier and updated before being checked in again. Even the smallest changes will be tracked. In this way, the platform ensures that the information hasn't been tampered with before being seen by the intended recipient.

Transcend® OUR PARTNER IN DUE DILIGENCE

TransPerfect, the world's largest provider of language and technology solutions for global business, and True Digital Dossier are partnering to offer the most secure solution for collaborative due diligence. Built on TransCEND"s trusted virtual data room technology and True Digital Dossier's blockchain platform, the combined solution offers fast creation, perpetual data notorization and an unalterable system of record for high-value due diligence.
